

DelaGet

Get the Experts. Get Results.

Who We Are

DelaGet delivers accounting, payroll and above store reporting services to many of the largest, fastest growing brands and operators in the industry. We do this through a subscription model so you don't have to invest in the hardware, software, people, and processes. We service 5,000 restaurants every day; DelaGet is one of the largest, most stable, and fastest growing service providers in the industry.

We Turn Raw Data Into Meaningful Information

Our patented processes provide restaurant operators with a simplified, easy-to-use approach to managing your business. DelaGet is a transparent and affordable way to process valuable information from multiple sources and smoothly exchange near real-time data from your store level all the way up to your headquarters.

Data Collection

We are the experts at collecting data from multiple unique sources. DelaGet collects data from an excess of 80 different systems, including POS/BOH, general ledger, payroll providers, supply chain companies, and a variety of other databases. DelaGet manages the entire data collection process, from initial set up through testing to ongoing collection activities. We even collect historical records so you can continue to monitor your comparative sales. We work 24/7 to oversee the data collection process. If a problem arises, a DelaGet employee is right there to get you up and running as quickly as possible.

Normalization

DelaGet applies your business rules to the data we collect in order for it to flow into your business systems or reports transparently. We have well defined processes to capture your business rules so that we ensure your data is stored appropriately for your business. So when a report is generated, or a file is integrated into your accounting or payroll system, we eliminate manual processes therefore reducing your cost and increasing the accuracy of the transferred data.

Reports

A "big-picture" view of your operation is important to growth, improved market share, and profits. Our Business Intelligence system seamlessly gathers daily operational data from a wide range of sources—vendors/suppliers, store and/or unit-level sales, inventory, payroll, banking, marketing, local weather, corporate HQ—and consolidates it for a single-system view. The data can then be sent to and displayed on Web browsers, PDAs, and other devices, allowing you and your team to access vital information anytime, anywhere, and make informed, real-time decisions.

Integration

After collecting, storing, and normalizing the vast amounts of raw data from multiple points/systems, our data integration solution then effortlessly communicates information between your organization and your chosen vendor/partner organizations. Ultimately, data integration provides for you a comprehensive view of key business information and metrics while providing for your vendor-partners a method for data/invoice communication without the need for your staff's human intervention therefore reducing payroll and increasing accuracy.

Financial Services

DelaGet's Financial Services provide complete outsourced accounting and payroll services. We use industry standard technologies and procedures to address your daily operational requirements for individual restaurants and the reporting requirements of your corporate management. Another of the many benefits of outsourcing this function is scalability: Whether you're growing, maintaining unit counts, or eliminating the units with poor economics you don't have to adjust the size of your accounting staff to realize those operational goals. DelaGet's Financial Services offerings include the following:

- General Ledger Accounting
- Account Reconciliations
- Accounts Receivable
- Fixed Assets and Depreciation Accounting
- Accounts Payable
- Cash Management
- Payroll Services

Why Choose DelaGet?

Simple, you have one business to run; your restaurants. We help you to stay focused on running and managing your restaurants. Why would you buy and maintain the hardware, software, people and processes necessary to provide the same services DelaGet does when it isn't core to your business? **Aren't you better off investing in things that help you service more food or provide a greater level of service to your customers? Won't you see a greater return on investment?**
